WORK EXPERIENCE

Auvenir

04/2018 — 06/2018

Freelance full stack .net developer

I worked for a development team in Vietnam of Auvenir, a Canadian startup - Deloitte Venture, to help them to develop new features for their products. The products are developed by using:

- NodeJS, ReactJS, Javascript, JQuery
- C#, WEB API 2
- MongoDB, PostgresQL

My duty is:

- Helping the team to apply ReactJS for their new features
- Reviewing the existing implementation/processes and giving ideas for improvements such as:
 - Suggesting them to review current designs to fix inconsistent issues
 - Building the products with Product mindset
 - Using JIRA in the correct way to keep history of discussions. The information should be transparent in the team. Chatting should be used to discuss only, all conclusions must be updated to issues tracking system.
 - All team members should be responsible for correcting existing bad implementation when they have time; Copying and pasting the bad implementation must be avoided as much as possible
 - The team should do all related sub tasks so they can finish one feature as soon as possible; all members should integrate their work instead of assigning this work to one member, it will reduce the integration time.

Aksess Innkjøp AS

03/2017 — 03/2018

Freelance full stack .net developer

I worked for a Norwegian client to help them to develop and maintain their existing web application. This application is developed by using:

- ASP.NET MVC 5
- Telerik Kendo UI Web Components, JQuery
- MySQL

My duty is:

- Communicating directly to the client to get and implement requirements
- Reviewing the existing application and giving ideas for improvements such as
 - Stop using inline styles, using some CSS frameworks to make layouts are easier and take less time to develop and maintain
 - Using issues tracking systems such as JIRA to keep history of discussions. The information should be transparent in the team. Chatting should be used to discuss only, all conclusions must be updated to issues tracking system.
 - The changes should be committed/updated to/from source code control system as soon as possible for reviewing so that conflicts or wrong understanding can be found

as soon as possible.

- All team members should be responsible for correcting existing bad implementation when they have time; Copying and pasting the bad implementation must be avoided as much as possible
- Suggesting to use some database version controls system because most of business requirements are done in database; try to reuse existing functions/store procedures as much as possible

Robert Bosch Engineering and Business Solutions Vietnam

08/2015 — 03/2017

Specialist

My current project was CI-CAT system. It is a very big and important system in Bosch global. It includes some desktop applications and WCF services/API interface. It manages all necessary information of Bosch global employees/equipments so that they can access Bosch Network from everywhere such as Vietnam, India or Japan, etc. When an employee moves to another location/country, this system will support them to transfer their necessary information easily. External systems can get/update information via WCF services system.

My duty is:

- Developing new requests, fixing current bugs, communicating with other teams such as Operation team to get information to analyze problems then giving solutions.
- Collecting and reviewing work-around solutions, manual tasks to understand root causes and propose permanent solutions
- Reviewing current processes and suggest improvements such as reviewing current logging system and changing it to log more necessary information so that Operation team can solve issues faster.
- Reviewing new requirements, change requests from other teams so that impacts can be identified as soon as possible.
- Reviewing current implementation and finding potential issues such as missing error handling

My skills are used:

- .NET, Oracle, JIRA, TFS
- Management and analysis skills

Ozerside

04/2011 — 07/2015

.Net Senior Web Developer/Team Leader

My project was CMS project for a bank in France. There are some main features:

- This project contains one Back Office (BO) and some websites. Each website has different layouts (Front Office-FO) but users can manage its contents in the same BO. We also can split the websites easily; after splitting each website will have its own BO and FO
- This project can also communicate with youtube/amazone to upload or edit or delete a video. It also can get tweets
- Additional, It can also send notifications to a IOS application if there are some new contents.

- www.mirova.com
- www.seeyond-am.com

- emerise-am.com

My duty is:

- Developing important requests, fixing current bugs
- Analyzing new requirements, giving solutions, assigning tasks to team members
- Reviewing new requirements, change requests from other teams so that impacts can be identified as soon as possible.
- Managing team

My skills are used:

- .NET, MVC, NHibernate, LINQ, JQuery, CSS3, SQL Server, JIRA, Git
- Management and analysis skills.
