OBJECTIVE

I have 4 years experience as Java developer at CSC (change to DXC now). With good English skills I can read documents fast and correctly. I used to work in USA for 9 months so traveling for work is not a problem. I used to take leader role which is responsible for meeting and managing tasks in one team using Scrum stand up meeting

My experience is founded from a solid website with J2EE, Struts and DB2. I have strong will to learn new technology and use them in project for fast developing and easy maintainence. Recently, I started researching microservice architecture.
